

Annex 3.2.

Withdrawal characteristic curve (logic)

Working Gas Level	Withdrawal Capacity
%	%
0%	4%
8%	10%
54%	87%
54%	100%
100%	100%

The maximum Withdrawal Capacity depends on the working gas level of the Storage Customer in his respective Storage Customer's Storage Account, expressed as a percentage (hereinafter: "Working Gas Level"). Depending on the Working Gas Level the Storage Service Provider may adjust on a percentage basis as described above in the table and the Withdrawal characteristic curve (logic) the overall contracted Withdrawal Capacity of a Storage Customer.

Within a range of a Working Gas Level of 54% up to 100% the Storage Customer may use 100% of the Withdrawal Capacity. In case the Working Gas Level falls below 54% the Withdrawal Capacity shall be gradually decreased on a percentage basis depending on the actual Working Gas Level in line with the threshold ranges described in the table above.
